

REMARKS

The present Amendment and Request for Reconsideration is filed in response to the Office Action mailed on 6 June 2006. In the present amendment, the Applicant amends claims 1, 5, 14, 16-19, and 21 and cancels claim 20. The Applicant respectfully requests entry of this Amendment and reconsideration of the application as amended.

The Applicant respectfully submits that no new matter has been entered by such amendment; amended claims 1, 5, 14, 16-19, and 21 are fully supported by the application as originally filed.

In the Office Action mailed on 6 June 2006, the Examiner indicated that claims 11-13 were allowable. In response, the Applicants respectfully acknowledge the Examiner's assessment and indication of allowability of such claims.

In the same Office Action mailed on 6 June 2006, the Examiner rejected claims 1-10 and 14-21 of the present application under 35 U.S.C. § 102(e) and 103(a) based on U.S. Patent No. 6,311,055 B1 to Boltz, U.S. Patent No. 6,295,447 B1 to Reicheit et al., and U.S. Patent No. 6,081,731 to Boltz et al. In response, the Applicants respectfully disagree and submit that the rejected claims as amended are allowable over the prior art of record for at least the following reasons.

The present application is directed to restricting particular long distance telephone calls made from a wireless communication device. The long distance restriction information includes information indicative of one or more allowable/disallowable country codes or area codes. According to the present application, these restrictions are provided through use of a *host enterprise server of a private communication network of an enterprise which includes an individual user of the wireless device* and which is outside of the wireless network within which the wireless device operates. The long

distance call restrictions may be, for example, managed by an IT department of a corporation which has authority or control over the wireless device.

The prior art of record, taken alone or in combination, do not teach or suggest long distance call restrictions provided through use of a host enterprise server of a private communication network of an enterprise which includes an individual user of the wireless device. In particular, Boltz do not teach or suggest the use of a host enterprise server of a private network of an enterprise (e.g. managed by an IT department) for maintaining storage of long distance restriction information. Instead, Boltz teaches the use of a database in the SS7 signaling network (not a private network of an enterprise which includes the individual) or other public databases/networks. Thus, private control by the enterprise may not be easily obtained by Boltz.

As apparent, the present invention as defined by the amended claims is advantageous over the prior art of record in that *private* control may be provided for restricting long distance calls, separate from the governing wireless and telephony network, in a flexible and convenient manner for enterprises such as companies and corporations.

Other arguments for patentability are apparent but considered moot in light of the arguments already presented.

The Applicant request entry of this Amendment and reconsideration of the claims. The Applicant respectfully submits that the application as amended is now in a condition suitable for allowance.

Thank you. Please feel free to contact the undersigned if it would expedite the prosecution of the present application.

Date: 2 August 2006

Respectfully submitted,

JOHN J. OSKOREP
